CS/PRES BRIEFING FOR
[REDACTED]

25X1A

SOVIET UNION

I. Each year, in preparing for this briefing, I start with the assumption that I can dispense with the Soviet and Chinese military posture because I must have covered it more than adequately in the past---but it turns out that there have been enough new developments so that a global briefing can't just skip over the Communist World.

A. This year, however, I have a little more leeway. [REDACTED] gave you a full

25X1A

briefing on Vietnam last night, and later

25X1A

today [REDACTED] is going to cover the Middle East and South Asia, and [REDACTED]

25X1A

25X1A

[REDACTED] will take care of South America.

B. On that basis, I may be able to start out with Soviet missiles and Chinese Red Guards, and still get to places like Indonesia, Cyprus, and Nigeria.

II. I have mentioned before that the Soviets for a number of years now have been engaged in a military dynamic/research, development, and procurement program obviously designed not only to catch up

~~SECRET~~

①

to the United States quantitatively, but to look for a possible ~~conceptual~~ ^{technological} breakthrough which might shift the balance in Soviet favor.

A. We still see no evidence of any such major breakthrough to completely new weapons concepts, but the Soviets this year are going to spend more on the military than in any year since World War II--and still more next year.

1. More than 20 billion rubles ~~in~~ in U.S. terms, buys over \$56 billion in defense, which approximates our defense effort, excluding Vietnam, on an economic base half the size of ours.

B. We estimate that they will approximate our ICBM launchers in next 18 to 24 months. (1,000+)

~~ExxxTheixxmnnayxixzznizsoxbuyingzkkxz~~

C. We consider it significant that ~~about~~ ^{more than} half of the force will be SS-11---relatively small and less accurate in comparison their other missiles, hence suited as "city buster."

1. In keeping with concept of "assured destruction capability."

(PARADE PHOTO)

III. Increase in numbers being accompanied by new weapons.

A. Soviets have begun production of new submarine class with 16 tubes for submerged launch, probable nuclear propulsion, bigger

displacement than our Polaris. We estimate they could match our Polaris fleet about 1975.

1. Last week, ^{they} rolled submerged launch missile in Moscow parade.

25X1D

2.

25X1B

3. This is probably missile shown in parade, and weapon for new submarine.

IV. ICBM is probably third-generation SS-9. Warhead profile is abnormal--dummy, heavy warhead, or FOBS?

March 62 -- Khrushchev boasted of "global rocket."

(PHOTO, SCRAP)

25X1B

May, 1965 -- "global rocket" paraded--but this one never flew.

China

[REDACTED]

25X1D

MRBM R&D program has made steady progress--

25X1B

25X1B

[REDACTED]

We expect limited deployment

25X1B

within next six months.

Chinese have facilities ready and have technology to start ICBM test program. If start soon, and no major hitches, could have few ICBMS of 6,000 n.m. deployed and operational early 1970's.

But advanced weapons development is only program that has made any significant progress in China in past few years, and this accomplished only by overriding economic, ~~and~~ military and scientific priorities.
